

Litron “Makes the Mark”

Bringing Laser Marking In-House

Along with their recent growth and expansion of facilities, Litron has taken a further step to becoming a ‘one-stop-solution’ for [Laser Services](#) by bringing Laser Marking in-house. The addition of this service gives Litron’s customers the added benefit of being able to have their components marked/engraved to specification without leaving the building.

The Same Controls and Documentation

The [laser marking service](#) at Litron will run under the same quality controlled and documented environment that the rest of the facility does. “Each process and part will be tracked and documented through process control documents to ensure a repeatable process”, says Chris Corradino, Process Engineer under the Laser Welding division of Litron. “We realize many of our customers will be sending parts throughout the year that need the same or similar markings and having a documented and repeatable process will save costs and headaches down the road”.

Medical and Aerospace Marking/Engraving

Litron primarily services the Aerospace and Medical industries and along with the [laser welding](#) and sealing needs, these industries typically have some type of marking need as well. “With Laser Marking, we now offer an additional value added service to the packages and component’s we’re already working with each day”, says Chris Stefaniak, Process Engineer under the Electronic Packaging division of Litron.

About Litron

Founded in 1997, Litron, Inc. is a worldwide provider of custom laser systems and a leading supplier to the aerospace, defense, and medical industries for contract manufacturing services in laser welding, laser marking, hermetic sealing, and hi-rel electronic package fabrication.
